

Babies Skin –Eczema/Dermatitis

Eczema/Dermatitis are inflammatory conditions of the skin. The treatment of eczema and dermatitis depends on the cause and whether it is an atopic or a contact form of eczema. Junipers sensitive products calm the skin and reduce itchiness associated with these conditions, whilst protecting sensitive skin from harsh weather conditions and environmental factors.

A maintenance skin care routine for babies with eczema/dermatitis of the body should consist of:-

- Cleanse with **Calming Face and Body Wash**
- Moisturise with **Calming Jojoba Moisturiser**
- Lock in moisture with the **Medi Balm** (evening only)

Tips

Avoid synthetic clothing, irritants and harsh chemicals in anything, especially skincare.

Calendula teabags infused in the bath is a gentle way to calm the skin whilst bathing. Avoid any contact with strong perfumes and body lotions as this will irritate the baby's skin further making the condition worse.
