

Babies Skin –Eczema/Dermatitis

Eczema/Dermatitis are inflammatory conditions of the skin. The treatment of eczema and dermatitis depends on the cause and whether it is an atopic or a contact form of eczema. Junipers sensitive products calm the skin and reduce itchiness associated with these conditions, whilst protecting sensitive skin from harsh weather conditions and environmental factors.

A maintenance skin care routine for babies with eczema/dermatitis should consist of:-

- Cleanse with **Calming Face and Body Wash**
- Moisturise with **Calming Jojoba Moisturiser**
- Lock in moisture with the **Medi Balm**

Tips

Avoid synthetic clothing, irritants and harsh chemicals in anything, especially skincare.

Calendula teabags infused in the bath is a gentle way to calm the skin whilst bathing. Avoid any contact with strong perfumes and body lotions as this will irritate the baby's skin further making the condition worse.

In Addition to the recommended routine above, the **Ultra Calm Replenishing Cream** and **Calming Treatment Serum** may be used on affected areas if required from the age of 3 months +
